

# ELECTRIC

Electric hearth products are the newest types to burst onto the scene. Electric Fireplaces and Stoves offer the ultimate in convenient installation and operation – you just plug them in and turn them on. But the most dramatic aspect of Vermont Castings Electric Hearth Products is the flame. Using a patented technology, these products have a flame that is truly amazing in its realism.

DEF33

## TECHNICAL Q & A

**Q: Where is the best location to install an electric fireplace?**

A: Since these fireplaces are considered decorative appliances, they can be located virtually in any room in your home.

**Q: How difficult is it to install an electric fireplace or stove?**

A: Both fireplace models are easy to install, available with various trim options and plug into any standard 120 volt outlet. The Addison electric stove is equally easy to install.

**Q: Are the installations permanent?**

A: While the electric fireplaces can be built in like regular fireplaces, including them in a cabinet is a much more convenient installation. The DEF33 and Addison can be relocated at any time from room to room. The HE32EFI model is smaller and fits into most prefabricated masonry fireplaces. These models can go with you when you move or be included in a house purchase.

**Q: Do these fireplaces or stoves require venting?**

A: No. Because these fireplaces and stoves are electric, no venting is required. If the HE32EFI model is being installed into an existing fireplace, the chimney or liner should be plugged to prevent drafting.

**Q: How close can I install an electric fireplace or stove to a combustible wall?**

A: Because these electric products have a low BTU rating, no clearances are required.

**Q: How does an electric stove or fireplace operate?**

A: They are designed to provide a comfortable level of heat. Each unit produces 1450 watts of power and 4500 BTU's. A randomized filtered lighting simulates flame pattern and glowing logs.

**Q: Can I adjust flame and heat output?**

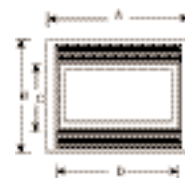

A: Yes. Each electric fireplace has an adjustable flame height and lighting control switch. The Addison electric stove does not have this feature. Each electric product includes a fan system to distribute heat to your room.

**Standard Features & Benefits**

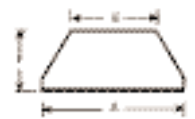

- Upper and Lower Polished Brass Window Trim
- Distributes a subtle warm even heat by means of a quiet fan system
- Patented technology: Randomized filtered lighting simulates flame pattern and glowing logs
- Actual deep, glowing ember bed without the use of mirrors
- Adjustable flame height and lighting control to suit any type of environment
- Easy to install, plugs into any standard 120 volt outlet
- Can be relocated at any time, from room to room
- Fits any Vermont Castings, Majestic Products 33" cabinets
- Designed to provide a comfortable level of heat.

**Specifications**

BTU Input: 4,500  
Watts of power: 1,450

A 33" / 838mm  
B 28 1/2" / 730mm  
C 16 3/8" / 416mm

D 31" / 787mm  
E 17" / 430mm  
F 11 1/2" / 292mm
